

**Ballona Wetlands  
Restoration Committee**

*Explore, Enjoy & Protect the Planet*

**This is the official position of the Sierra Club related to the Ballona Wetlands Ecological Reserve proposed “restoration” plans.**

**Preserve the Ballona Wetlands Ecological Reserve**

**Whereas**, while more than 90 percent of California’s coastal wetland ecosystems have been destroyed, the type of habitat found at the Ballona Wetlands Reserve is the rarest of our remaining coastal wetlands, 640+ acres on the Los Angeles coast were acquired by the State of California in 2003/2004 for preservation using \$140 million, mostly from Wildlife Conservation bond funds, and the ecological reserve is public land dedicated for protection of ecologically sensitive species; and

**Whereas**, flora and fauna found at the reserve include endangered and imperiled species such as the California Gnatcatcher, White-tailed Kite, California Least Tern, Belding’s Savannah Sparrow, El Segundo Blue Butterfly and the Lewis’ Primrose; some species are year-round residents of Ballona while some bird species migrate from as far away as the Amazon River and Arctic Circle; this ecosystem has abundant flora and fauna, including rare species and a high diversity of pollinators; and

**Whereas**, the California Department of Fish and Wildlife and other government agencies are considering plans to significantly alter the reserve; by bulldozing massive amounts of earth that would radically change the current habitat and eliminate or displace current flora and fauna; and remove the current levees that would release polluted water into the fragile ecosystem;

**Therefore be it resolved**, that the Sierra Club Ballona Wetlands Restoration Committee clarifies that the Club opposes the Department of Fish and Wildlife’s current invasive plans for restoration, and will inform both the Department and all elected officials and other decision-makers about this resolution; and

**Therefore be it further resolved**, that the Sierra Club Ballona Wetlands Restoration Committee calls for the preservation of the existing habitat and encourages community-engaged restoration for the protection of existing species and following the precautionary principle: "do no harm" i.e. only using hand tools or small equipment for habitat enhancement and restoration, and also for the reintroduction of additional native flora and fauna.
